SuryaRay Lamps

When nature shines a light...

CATALOG 2026

Unique handcrafted ambient light sculptures made of wild wood and rice paper.

SuryaRay
Lab

Light sculptures made with nature

SuryaRay Lamps are handcrafted light sculptures created in dialogue with nature, using reclaimed wild wood shaped by time and the elements - capturing a touch of the wilderness within organic, fluid forms.

Through a quiet process of transformation, each piece is given a new purpose - to bring warmth, depth, and a sense of calm presence into the spaces they inhabit. They breathe with the space and seem rooted in it.

The project began with a simple question: how can forgotten wood be brought back to life, and reintroduced into contemporary spaces while preserving its natural character?

Each sculpture follows the organic form of the material, allowing the wood to guide the final expression. A carefully shaped rice paper cocoon introduces a soft, diffused light, creating a gentle interplay between structure and illumination.

A light reminiscent of the last ray of sunset — or the quiet warmth of a fireplace.

More than decorative objects, these sculptures embody transformation and natural diversity — a subtle reminder of our connection to nature. Just as every tree grows in its own way, each piece carries a distinct presence and expression.

Shaped by natural forces and refined through craftsmanship, they reflect both origin and intention. In a fast-paced world, they invite a slower, more attentive experience of space — introducing a quiet, immersive atmosphere, with a refined presence that draws attention without demanding it.

Pillar - floor light sculpture

Floor light sculptures emerge as the focal point in space with their shape rising high and illuminating the space with a warm, atmospheric light. They are made usually by merging two pieces of wood into a single sculptural form. Textile cable spiralling down like a vine on a tree brings fluidity and elegance to the design.

Etheria - custom light sculpture

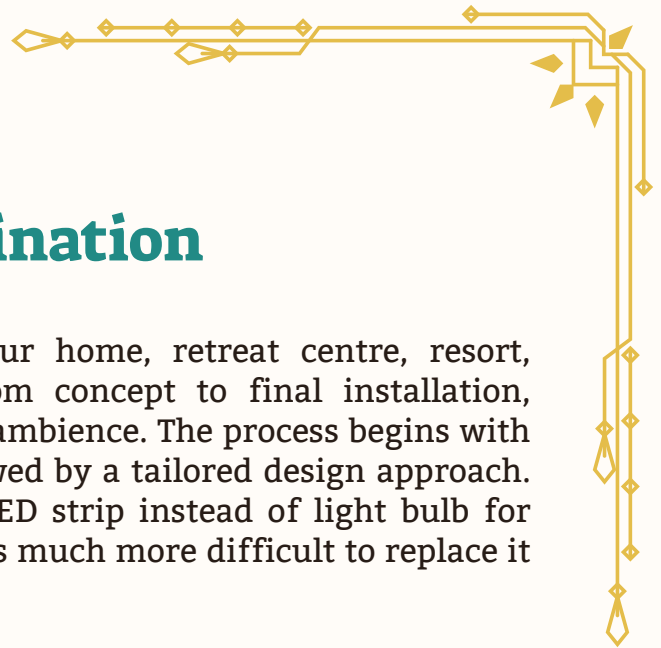

Each custom light sculpture is crafted from a special piece of wood and made in the size that best suits your space, with the possibility of seamless integration into the architecture. With careful attention to the spatial vision and context, the lamp is designed to bring the atmosphere you envision to be experienced.

Complete space illumination

I offer the possibility to co-create your home, retreat centre, resort, apartment or other special spaces from concept to final installation, carefully and intentionally crafting the ambience. The process begins with an on-site or remote consultation, followed by a tailored design approach. There is also an option to implement LED strip instead of light bulb for more intricate flow of light - though, it is much more difficult to replace it later.

Since there might be multiple SuryaRay Lamps created, I will make a tailored proposal - including cost of materials, delivery and installation.

Veil - wall-mounted light shade

Handcrafted from a small piece of wood and a bigger shade of rice paper, light shades are designed to be hanged on the wall or ceiling to cover integrated wall lights in your space. They create a memorable and slightly mystical immersive atmosphere within transitional spaces.

Zenith - ceiling light sculpture

Zenith is a ceiling light shade or a hanging chandelier lamp that is placed on a ceiling to be seen at the moment you step into the space. It is a central light that introduces a sculptural focal point defined by organic forms.

Anchor - table lamp on stand

Made of smaller pieces of wood rising on a stand of various reclaimed woods, currently olive wood. The stand also serves as a little bowl to store your precious belongings at night. They offer a gentle readable lighting for the evenings and an inspiring atmosphere to support moments of relaxation and quiet focus.

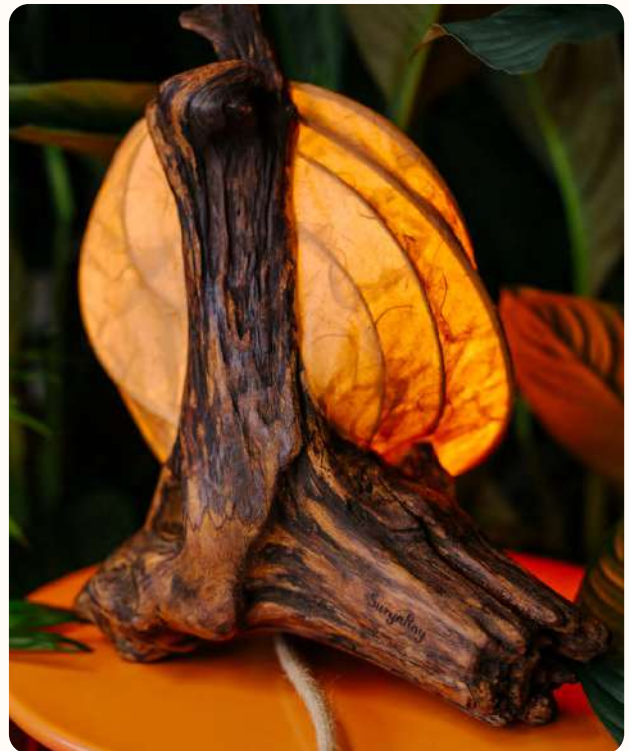

Ember - standalone lamp

Glowlings are created from smaller, standalone pieces of wood that can rest on a surface or be adapted for wall placement. They remain closest to the original character of the material, allowing the natural form to speak with minimal intervention. Their soft, ambient light introduces a quiet presence into the space, ideal for more intimate corners and subtle atmospheric accents.

SuryaRay
Lab

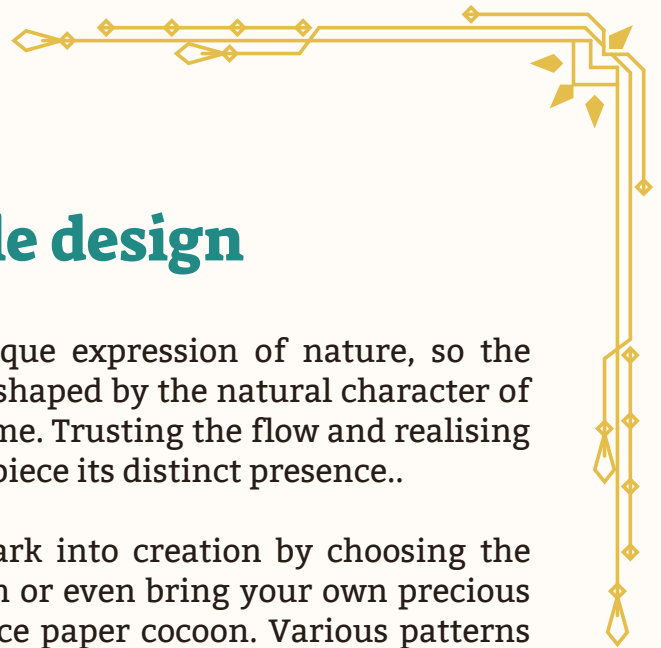

Spark - mini lamp

Mini lamps are made to bring a subtle connection to natural materials into smaller spaces. They are also perfect for camper vans or tiny house. They are made from a composite of tiny wooden pieces attached to an olive wood stand, which can also be mounted on the wall.

Unique & customizable design

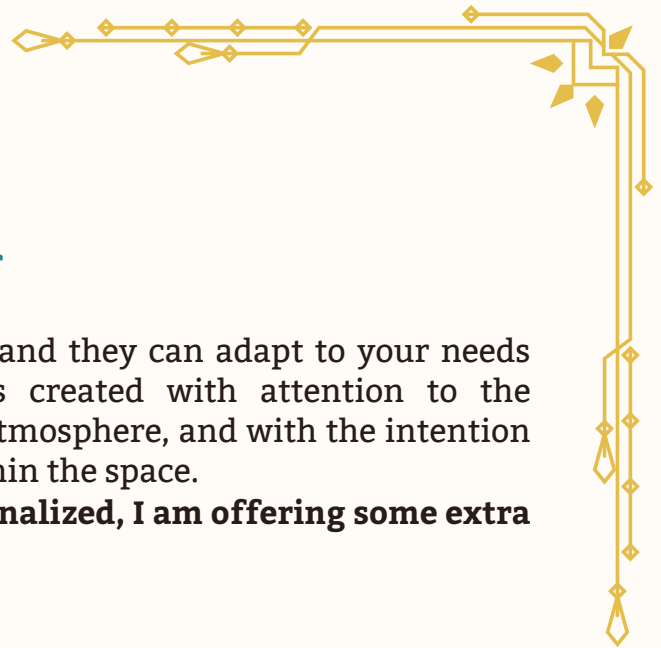

Each SuryaRay Lamp is completely unique expression of nature, so the result cannot be predicted. Each piece is shaped by the natural character of the material, resulting in a unique outcome. Trusting the flow and realising that uniqueness is what gives each piece its distinct presence..

Upon request you can also put your mark into creation by choosing the piece of wood from my offered collection or even bring your own precious piece. Bright beige or intimate orange rice paper cocoon. Various patterns of high quality textile cables made in Italy.

In the past few years I have been developing a way to keep seamlessly connected rice paper cocoon and an ability to change the light bulb. So every lamp is charged with a special small LED light bulb and a quick way of changing it - simply by pulling the cable out of the wood.

Make it truly personal

SuryaRay Lamps are completely unique and they can adapt to your needs perfectly. Each commissioned piece is created with attention to the character of the space and its intended atmosphere, and with the intention of enhancing harmony and presence within the space.

For those who want it even more personalized, I am offering some extra special add-ons.

SPECIAL TEXTILE CABLE PATTERN

If you want the cable to flow down from the lamp in your style, I am offering a **wide selection of high-quality textile cables made in Italy**. Upon request, I will send you the list of all available patterns to choose from. Also I can create **longer cable if that fits your needs** better (initially smaller table lamps have 1,5m of cable and bigger floor lamps have 2,5m).

PERSONALISED ENGRAVING OF A SYMBOL OR A PHRASE

The lamps are not only decoration, but objects of intention, as a meaningful and personal design element. Upon request I can engrave a special symbol or a phrase into the wood, so they support the intention behind them.

CHARGING THE LAMP WITH A PERSONALISED CRYSTAL

Each lamp can be **embedded with a carefully chosen crystal**, selected to support a specific intention or area of life. Crystals are often valued for their stable, ordered structure and their ability to hold symbolic meaning, making them useful as anchors for focus and intention. By integrating a personalized crystal into the design, the **lamp becomes even more meaningful object** that supports clarity, direction, and a steady connection to what the space is intended to express.

Creator behind the lamps

SuryaRay Lamps are created within the broader artistic brand of SuryaRay Lab of Creative Alchemy, founded by Klemen Orešnik in Škofja Loka, Slovenia.

Klemen is a multidisciplinary artist working across visual art, sound, spatial experiences and facilitation of immersive creative workshops. With a background in graphic design and years of exploration in analogue and intuitive creation, his work today focuses on transforming natural materials into objects that shape atmosphere and perception.

His approach is guided by a deep appreciation for nature - not only as inspiration, but as a collaborator. Each piece reflects an ongoing dialogue between raw material and human intention. Through his work, he explores how light, form, and texture can influence the way we experience space - inviting a more attentive, grounded, and sensory connection to our surroundings.

An exploration of how light can gently reshape the atmosphere of a space.
